Web System and Technology
2nd Semester S.Y 2025-2026

IT 112 WEB SYSTEMS AND TECHNOLOGIES

BU TRANSAKTO

FINAL PROJECT PROPOSAL

GROUP NAME: KMJ's

MEMBERS:

BELLEN, JUVY

HERMO, MA. MERA

INTIA, KIMBERLY ANNE

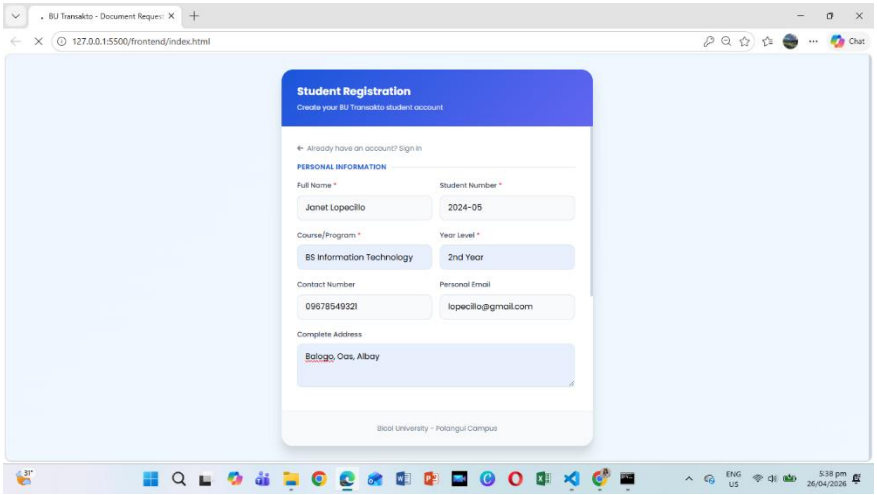
REALUBIT, JANET

SEPTO, JESSECA

COURSE & BLOCK:

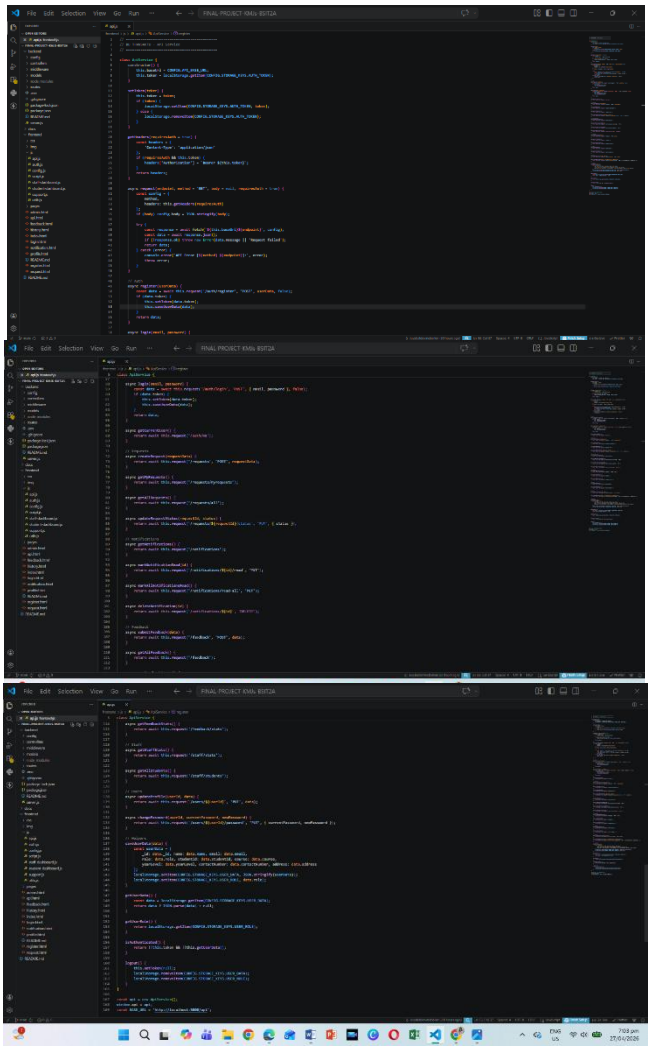
BSIT-2A

I. Screenshot of the HTML form interface

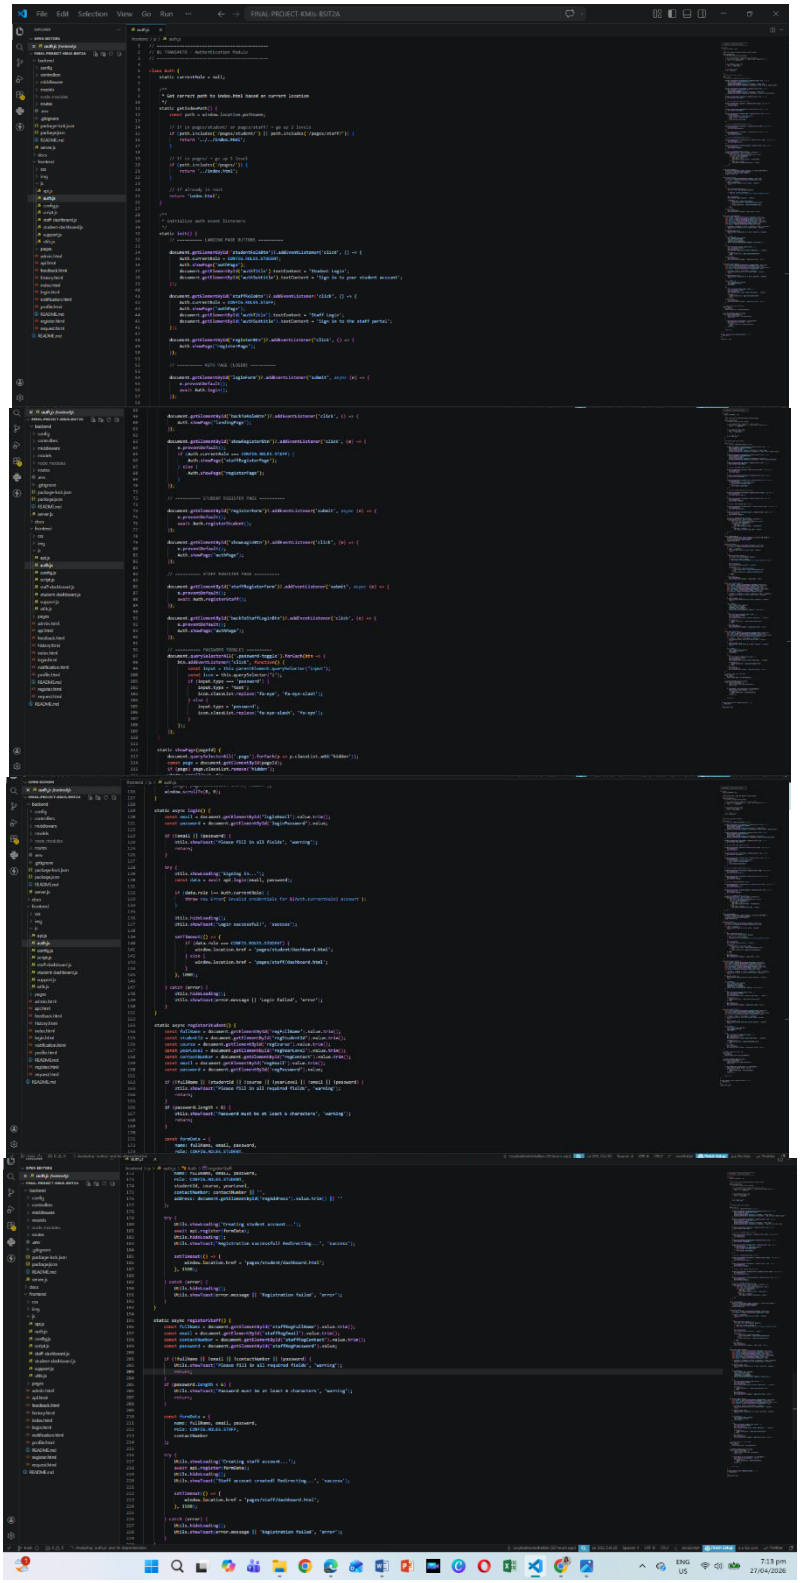


II. Screenshot of JS code used for API connection

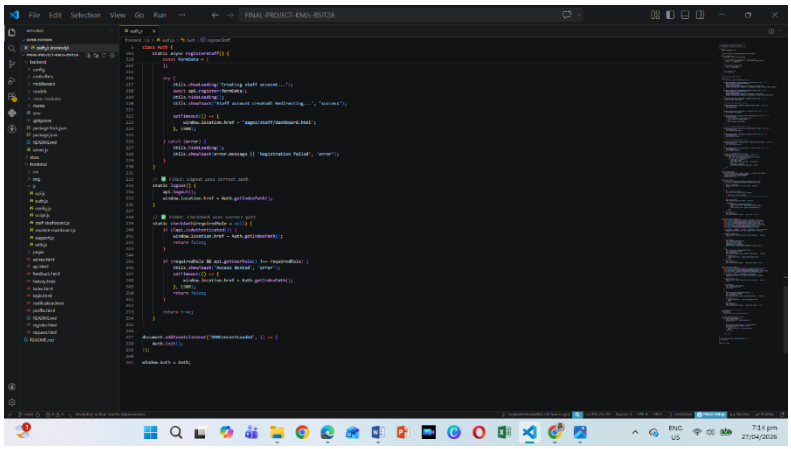
api.js



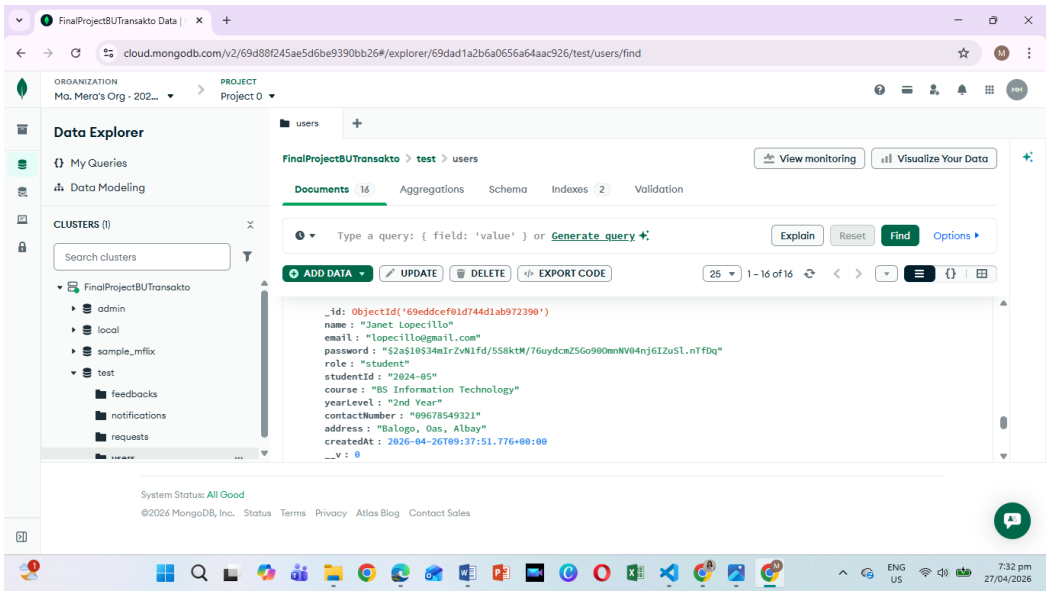
auth.js



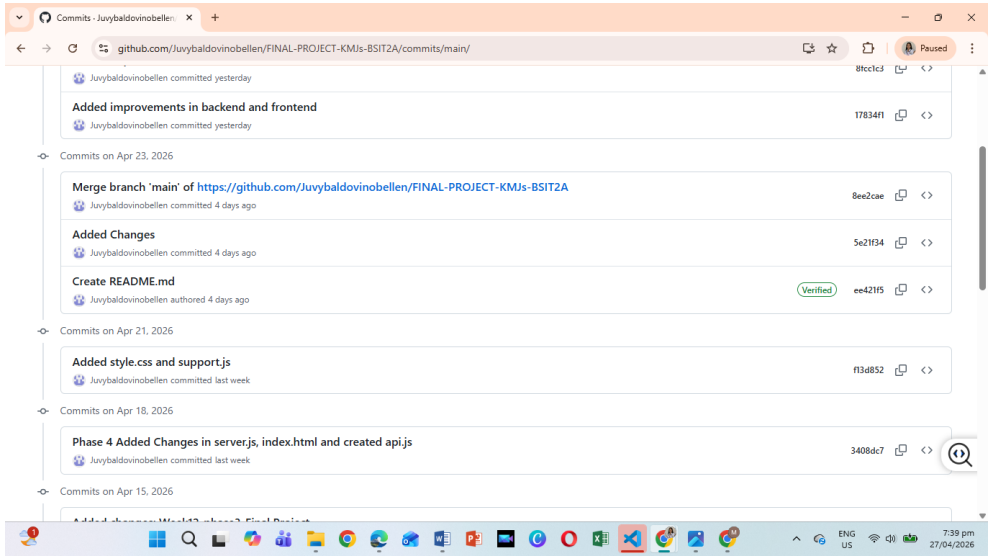
V



III. Screenshot of MongoDB document inserted



IV. Screenshot of GitHub commits (frontend and backend)



V. Short reflections from each member

Frontend Developer (Kimberly Anne Intia)

As a front-end developer, working on capturing form data, validating inputs, and sending requests to the backend helped me appreciate the importance of creating a smooth and secure user experience. I learned how to properly handle user inputs by applying validation techniques to prevent errors and ensure data accuracy. This task also enhanced my understanding of how to communicate with the backend through requests, making the application more functional and reliable. Overall, it improved my attention to detail and reinforced the role of the front-end in maintaining both usability and data integrity.

Backend Developer (Janet L. Realubit)

As a Backend Developer, ensuring that POST endpoints are working and returning JSON responses helped me strengthen my understanding of server – side logic and API development. I learned how to properly handle incoming data, process requests, and structure consistent JSON responses for the front – end to consume. This task also improved my debugging skills and attention to detail, as I had to make sure endpoints function correctly and handle errors efficiently. Overall, it enhanced my ability to build reliable and well – structured backend services.

Github Manager (Juvy Bellen)

As a Github Manager, merging updated frontend and backend branches and pushing all changes with clear logs helped me understand the importance of version control and team collaboration. I learned how to properly manage branches, resolve conflicts, and maintain a clean and organized repository. Writing clear commit messages also improved communication within the team, making it easier to track changes and updates. This task strengthened my responsibility in ensuring that all contributions are properly integrated and documented.

Database Manager (Ma. Mera Hermo)

As a Database manager, I was able to observe and assist in organizing and managing the system's data. This helped me understand the importance of keeping data accurate, secure, and well - structured. I learned how queries work and how they help in retrieving information efficiently. I

also showed me how proper database design can prevent errors and data duplication. Overall, this experience helped me improve my understanding of databases and appreciate their role in making the system function smoothly.

Documentation Officer (Jessseca Mae Septo)

As a Documentation Officeer, working on documenting the workflow and providing screenshots and notes in the report helped me understand the importance of clear and organized communication in a project. I learned how to present processes step – by – step in a way that is easy to follow and replicate. Including screenshots and detailed notes made the documentation more effective and user – friendly. This task also improved my attention to detail and ability to translate technical procedures into understandable content, ensuring that the report serves as a reliable reference for both current and future users.
